Summary

AI Engineer and full-stack developer with hands-on experience building automation pipelines, agentic systems, and ML-powered products in production banking and fintech environments. Proven ability to eliminate manual workflows through intelligent automation, deploy end-to-end MLOps pipelines, and deliver user-facing products with clean UI/UX.

Experience

Jyoti Bikash Bank Limited (JBBL)

Feb 2026 – Present

AI Engineer Intern

Kathmandu, Nepal

- Engineered a Python-based automation pipeline to generate NRB-compliant card transaction reports, eliminating a fully manual Excel process and reducing report generation time from hours to minutes.
- Built an intelligent merchant and user data aggregation system that pulls, deduplicates, and consolidates records across two external portals (FonePay and NepalPay) — replacing manual reconciliation workflow.

Moru Digital Wallet

Dec 2025 – Feb 2026

Product Developer Intern

Kathmandu, Nepal

- Led full-stack development of a live forex and metal rates product, architecting both the backend data pipeline and the user-facing interface from scratch.
- Optimized frontend API consumption by migrating data-fetching logic to server-side rendering, significantly reducing unnecessary client-server round trips and improving page load performance.

Projects

VisionPark – Smart Car Parking System | *Python, Django, Computer Vision, OCR, PostgreSQL*

- Developed a full-stack parking management web app with real-time slot visualization and OCR-based automated license plate recognition, reducing manual entry errors by 90%.
- Integrated a chatbot assistant and push notification system for real-time user alerts and booking confirmations.

Phishing Site Detection MLOps Pipeline | *Docker, MLflow, Airflow, FastAPI, MariaDB*

- Built an end-to-end automated MLOps pipeline covering data ingestion, preprocessing, model training, and FastAPI deployment with real-time monitoring and scheduled retraining via Airflow.
- Integrated MLflow for experiment tracking and model versioning, achieving 85% reproducibility across training.

Stroke Prediction – Stacking Ensemble | *Python, FastAPI, PyTorch, CatBoost, XGBoost, LightGBM*

- Designed a stacking ensemble model on highly imbalanced medical data using advanced sampling and calibration techniques, achieving 70%+ recall for early stroke detection in clinical decision support.

Education

BSc (Hons) Computer Science with Artificial Intelligence

Mar 2024 – Mar 2028

Sunway College, Kathmandu

Technical Skills

Languages: Python, JavaScript, SQL

AI / ML: PyTorch, Scikit-learn, CatBoost, XGBoost, LightGBM, MLflow, Airflow, Docker, CI/CD

Backend: FastAPI, Django, PostgreSQL, MariaDB, Redis, REST APIs

Frontend: React, Next.js, Server-Side Rendering, Figma

Certifications & Achievements

- **DAV Codefest 2025 – 2nd Place** – Ranked 2nd out of all competing teams in a 72-hour national hackathon.
- **ICT Award 2025 – Top 12 Semi-Finalist** – Recognized for *New Innovation in Healthcare* category.
- **Data Science Fellowship** – Selected for a competitive, project-based data science program.
